

RECYCLE YOUR *NESPRESSO* CAPSULES AT WORK

The *Nespresso* experience is about more than just good coffee. *Nespresso* is also committed to sustainability with innovation in recycling being crucial to achieving our long term goals. *Nespresso* uses aluminium for its capsules, as it is the best material available today to protect the freshness, taste and quality of the *Nespresso* Grand Cru coffees. Aluminium is also infinitely recyclable. This means that there is potential for a second life within every capsule.

THIS RECYCLING PROGRAM IS EXCLUSIVELY FOR *NESPRESSO* ALUMINIUM CAPSULES

There are some things that New Zealand's domestic rubbish systems cannot effectively process. Which is why, since opening our first boutique in 2011, *Nespresso* established its own recycling system and partnered with a recycling plant that could process *Nespresso* aluminium capsules. So when you have finished enjoying your Grands Crus please return your *Nespresso* aluminium capsules to us. We will see to it that they go on to achieve their potential through recycling.
